work - cisco meraki

Software Engineer / Data Engineer

San Francisco, CA

Sep. 2018 - Present

- Developed a production anomaly detection system for network degradation performance alerts. It is currently running for tens of thousands of customers.
- Used Python, Pandas, Jax, NumPyro, Docker, AWS, Terraform, and MLFlow.
- Actively involved in model development and optimization, developer workflows and tools, and productionizing.
- Improved backend scalability by setting up load balancers and optimizing API calls.
- Active mentor and interviewer.

education - brown university

B.Sc. Mathematics - Computer Science

GPA: 4.00

Sep. 2014 - May 2018

Diverse undergrad education specializing in topics at the intersection of theoretical math, applied math, and computer science. Capstone in computer vision.

about me

Originally from MA, I currently live in San Francisco. I want my work to answer novel questions through data science, all while leveraging the best practices of testing, automation, and visibility of traditional software engineering. I appreciate picking up work outside my expertise and enjoy the opportunity to grow my skillset. Outside of tech my interests include sustainable agriculture, trail running, and fermented foods.
